Subject: LEED Statement on SFS intec Austenitic Stainless Steel Panel Clips

Dear Valued Customer:

Thank you for your continued business with SFS intec. We understand the need to be able to apply for LEED credits in today's construction industry, and further recognize the need for ourselves to collectively act in environmentally responsible manners in order to preserve our future. As such, please accept this letter as a statement on recycled content of stainless steel materials used by SFS intec in the manufacture of stainless steel panel clips.

Based on estimates provided by suppliers of steel to SFS intec and by the Specialty Steel Industry of North America (SSINA), it is estimated that stainless steel clips manufactured by SFS intec contain a minimum of 50% post-consumer recycled steel content.

Unfortunately, due to the number of raw materials and extraction sites relevant to this product, SFS is unable to make a blanket statement regarding the raw material extraction locations used in the production of this product. However, should you require additional information regarding the extraction location(s) for specific manufacturing lot or lots of product, please contact your local SFS intec Service Representative.
